Three paired comparisons: augmentation effect and scene-allocation increment

The same frozen NoAs30 is reused in A and B. C is the incremental scene-allocation effect. There is no fourth condition or factorial interaction.
Fixed seed 2026092701; n = 1. No SD or CI. Total E30 = 20 + 10, reset cosine10; 6L forwards, L scale 1.25; 0 extra mechanism NN.
Source eligibility: FAIL; fixed recipe closed, no E50. Formal readout is descriptive; no repeated gain is established.
